

Silicone Cover for HM Plug-On Transmitter

3 September 2019

This tough silicone cover protects the HM transmitter from moisture and dust. The pliable material and the two-part design make it easy to install and remove.

Indicators and buttons are visible through the cover. The buttons can be pressed through the cover for basic operation.

Step 1

Install the bottom panel cover over the transmitter. Fit should be snug, and you should be able to see the LCD.

Step 2

Pull the top fully down over the HM and overlap the bottom panel cover securely. The silicone on silicone contact in the overlap keeps dust and moisture from reaching the transmitter housing.

IMPORTANT
The top cover must **OVERLAP** the bottom cover

Step 3

Attach the microphone, and apply a high quality, waterproof tape around the neck for extra protection.

Wrap waterproof tape around neck for extra protection.
